

VM sync

```
90
91 if __name__ == "__main__":
92     if len(sys.argv) != 4:
93         print("python3 <source_folder> <replica_folder> <sleep_duration_seconds>")
94         sys.exit(1)
95
96     source_folder = sys.argv[1]
97     replica_folder = sys.argv[2]
98     sleep_duration = int(sys.argv[3])
99
100     while True:
101         sync_folders(source_folder, replica_folder)
102         sync_folders(
103             purge=True, source_folder=replica_folder, replica_folder=source_folder
104         )
105         time.sleep(sleep_duration)
106
107 NORMAL ▶ master sync.py
```

1. Synchronization
2. Autoclean

During calling the `sync_folders` function, I use the `purge=True` flag and inversely pass the arguments to use the existing logic to check the `replica` directory for a mismatch with the `source` and perform autocleaning. `#Dont_repeat_yourself`
